Fifty-eighth session
Item 100 of the provisional agenda*
Implementation of the first United Nations Decade for the
Eradication of Poverty (1997-2006)

Implementation of the first United Nations Decade for the
Eradication of Poverty (1997-2006) and draft programme of
action for the International Year of Microcredit, 2005

Report of the Secretary-General

Summary

The present report is in two parts. Section I responds to General Assembly
resolution 57/266 on implementation of the first United Nations Decade for the
Eradication of Poverty (1997-2006), in which the Secretary-General was requested to
submit to the Assembly at its fifty-eighth session a report on its implementation. The
report finds that progress in reducing poverty is mixed at the regional and national
levels, and that on current performance many countries, particularly in sub-Saharan
Africa, are not likely to achieve the poverty reduction goal at the national level by
2015. A similar picture emerges for the attainment of the other Millennium
Development Goals. The report reviews the progress that has been achieved in some
selected areas that can significantly effect the attainment of the goals relating to
reducing poverty and hunger.

Section II of the report was prepared in collaboration with the United Nations
Capital Development Fund and responds to General Assembly resolution 53/197, in
which the Secretary-General was requested to submit to the Assembly at its fifty-
eighth session a report containing a draft programme of action for the observance of
the International Year of Microcredit, 2005. The report presents proposals for the
objectives and activities for the Year and provides several recommendations related
to its preparation and organization.

  F. Conclusions and recommendations ............................. 50–51 17
I. Progress in poverty reduction

A. Introduction

1. The General Assembly stressed in resolution 57/266 of 20 December 2002 that the first United Nations Decade for the Eradication of Poverty (1997-2006) should contribute to achieving the targets of halving, by 2015, the proportion of the world’s people whose income is less than one dollar a day and the proportion of people who suffer from hunger, through decisive national action and strengthened international cooperation as part of an integrated approach to achieving the internationally agreed development goals, including those contained in the United Nations Millennium Declaration. The Assembly also stressed the multidimensionality of poverty and highlighted key policy considerations that would contribute directly or indirectly to the fight against poverty. Selected issues pertaining to the implementation of the Decade are taken up in section I.C below.

B. Taking stock of progress

2. An important benchmark of the effective implementation of resolution 57/266 is the state of progress towards the time-bound development goals as contained in the Millennium Declaration, in particular the goal of halving the proportion of people whose income is less than one dollar a day, since they address the multidimensionality of poverty. The World Bank estimates that the proportion of poor people living on less than one dollar a day in developing countries declined from 29.6 to 23.2 per cent between 1990 and 1999 — a transition of roughly 123 million persons out of extreme poverty, even though the population in those countries grew by 15 per cent to 5 billion during the same period. If current trends are maintained, the goal is likely to be achieved at the global level. At the regional level, the picture is mixed. Apart from East Asia and the Pacific, and South Asia, all other regions have experienced setbacks since 1990 (see table). Progress towards the other development goals contained in the Millennium Declaration has been mixed and a comprehensive assessment will be presented in the report of the Secretary-General on implementation of the United Nations Millennium Declaration.

3. In resolution 57/266, the General Assembly underscored the importance of the empowerment of women as an underlying factor for effective poverty-reduction policies. In part, progress towards that objective is reflected in the extent and nature of women’s participation in the labour force. Gender disparity in the labour market has not improved much between 1990 and 2000. Globally, women’s share in non-agricultural wage employment was estimated at 36 per cent in 2000. Between 1990 and 2001, women’s share of non-agricultural wage employment rose in all regions except for the Middle East and North Africa, where the share fell from 25 to 22 per cent and in the transition economies where the share hovered between 48 and 49 per cent. The informal sector continues to be a more important source of employment for women than for men in most countries and is especially pronounced in sub-Saharan Africa where the share of informal non-agricultural wage employment for women is 84 per cent. In North African and Middle Eastern countries, however, the trend is reversed and more men find employment in the informal sector than women.

| Total, excluding China                      | 28.5 | 25.0 | 15.7 |

a The one dollar per day is in 1993 purchasing power parity terms. The numbers are estimated from those countries in each region for which at least one survey was available during the period 1985-1999.

b The head-count index is the percentage of the population below the poverty line.
4. Poverty reduction is not possible without the delivery of safe drinking water. Over the past decade, nearly one billion people have gained access to improved water supplies. According to the United Nations Children’s Fund and the World Health Organization the greatest gain in improved water coverage was achieved in South-central Asia, where the proportion rose from 72 to 85 per cent. The lowest coverage rates remain in sub-Saharan Africa, where only 58 per cent of the population has access. During the period under review, no progress was made in the least developed countries. Poor people continued to be the worst affected, with 50 per cent of the population in developing countries exposed to polluted water resources. Of the 1.2 billion people without access to safe drinking water, 40 per cent are located in East Asia and the Pacific, 25 per cent in sub-Saharan Africa and 19 per cent in South Asia.

5. Efforts to reverse the spread of HIV/AIDS, the fourth largest cause of death worldwide, have resulted in limited progress. At the end of 2002, an estimated 42 million people globally were living with HIV. In sub-Saharan Africa, HIV/AIDS is the leading cause of premature mortality and is reflected in the declining life expectancy. In 2002, there were 2.4 million AIDS-related deaths in sub-Saharan Africa and prevalence rates among adults aged 15 to 49 reached 8.5 per cent. At the global level, the number of adult women with the disease rose to roughly equal the number of adult men in 2002, suggesting that the disease is spreading fastest among women. In Asia and Eastern Europe, where HIV prevalence is on the rise, the high-risk subgroups are injecting drug users and sex workers. Recent declines in HIV prevalence in some countries have been attributed to successful prevention programmes.

**Official development assistance**

6. Official development assistance rose by 4.8 per cent in real terms from $52.3 billion in 2001 to $57 billion in 2002. Despite efforts for efficient and effective delivery of official development assistance, it is estimated that current pledges will fall far short of the amount needed to meet the goals of the Millennium Declaration. The World Bank estimates that the cost of achieving the goals is likely to require at least an additional $50 billion a year over and above the resources from developing countries themselves. However, an additional boost to official development assistance levels is possible, for instance, through the proposal of the United Kingdom of Great Britain and Northern Ireland to establish the International Finance Facility to facilitate the achievement of the Millennium Development Goals by 2015. The scheme would raise official development assistance to more than $100 billion through the use of long-term government donor pledges, which would back the long-term bonds that would be issued to finance the development and the Millennium Development Goals needs of developing countries.

**Debt relief**

7. Over the period from 1990 to 2000, the average debt service to exports ratio in all low and middle-income economies stood at about 18 per cent. The World Bank and International Monetary Fund estimate that for countries in the Heavily Indebted Poor Countries programme, the ratio of debt service to exports has been cut by more than 40 per cent, from more than 16 to 9 per cent (roughly half the average for all developing countries). The 26 countries that entered the programme are estimated to
be saving an average of $1.3 billion a year because of lower debt-servicing costs, compared with payments in 1998/99.3

8. As of April 2003, more than six years after the inception of the Heavily Indebted Poor Countries Initiative, of the 26 beneficiary countries that had reached the intermediate benchmark, the “decision point”, 8 have reached the “completion point”. The delay in bringing more countries to the completion point is attributed to the problems faced by some countries in preparing poverty reduction strategy papers and implementing fiscal targets, which partly results from the weak international economy, and to delayed funding of the Heavily Indebted Poor Countries Trust Fund. Moreover, some of the eight countries appear to have experienced worsening debt indicators, as a result of lower world commodity prices and export receipts than had been expected. However, even if commodity prices have fallen since the debt relief was calculated, it is possible for a country to obtain a “topping up” of debt relief at the completion point, as in the recent case of Burkina Faso.

C. Selected issues on implementing the Decade

9. In this section, two issues — governance at the international and national level and poverty reduction strategies — have been selected for discussion because they are among the key preconditions for countries to achieve rapid growth and poverty eradication. While poverty-reduction strategies flourish in a participatory environment, such a participatory approach can take root most easily when democratic governance is present.

Governance

10. The issue of governance at the international and national levels was highlighted in resolution 57/266 as an important element of an integrated approach towards poverty eradication. This concern about the contribution of democratic governance to social and economic development is in consonance with the view that has been highlighted repeatedly at numerous United Nations conferences and summits, including the World Summit for Social Development, the twenty-fourth special session of the General Assembly and the Millennium Summit. More recently, at the International Conference on Financing for Development, held in Monterrey, Mexico, in March 2002, there was agreement among Member States that good governance underpins the mobilization of both domestic and international resources for developing countries. At the 2002 World Summit on Sustainable Development, held in Johannesburg, South Africa, the importance of good governance to sustainable development was again given prominence.

11. There is increasing evidence that a considerable number of developing and transition economies in all regions have intensified efforts in strengthening governance through the development of participatory decision-making processes, greater accountability and transparency in public administration. According to the Human Development Report 2002, since 1980, 81 countries have taken significant steps towards democracy, 33 military regimes have been replaced by civilian Governments and 140 of the world’s nearly 200 countries now hold multiparty elections. In addressing the issue of democratic governance, the report also highlighted the fragility of some of those developments: of the 81 new democracies cited above, only 47 are fully democratic and many others do not appear to be in
transition to democracy, or have lapsed back into authoritarianism or conflict. This state of affairs underscores the vital need for support at the regional and international levels for the ongoing processes to promote democratic governance at the national level.

12. In Africa, for example, some of these national efforts have been supported by regional and subregional initiatives, such as that of the Steering Committee within the New Partnership for Africa's Development, to develop a proposal for standards in governance, and the African Peer Review Mechanism, to promote adoption of the standards and monitoring. National efforts to address corruption have also found concerted regional and international support: at the regional level, the African Union has a draft convention on preventing corruption, while at the international level, the Ad Hoc Committee for the Negotiation of a Convention against Corruption has been deliberating an international legal instrument to criminalize corrupt acts and monitor the implementation of its provisions.

13. The importance of good economic governance at the global level was reaffirmed in resolution 57/266 as being fundamental for achieving poverty eradication and sustainable development. The important developments in this regard are extensively covered in the report of the Secretary-General on the outcome of the International Conference on Financing for Development (A/58/216). Nevertheless, it is important to highlight some recent developments, such as the adoption of the Doha work programme at the Fourth Ministerial Conference of the World Trade Organization, that promises to create the conditions that can make the international trading system more development friendly and increase the capacity of developing countries to participate in the system more effectively. Effective market access for the products of developing countries is one key outcome of this promised improvement in the international trading system, which can make a singular contribution to faster growth and poverty eradication in poor countries. In this regard, the special needs of the least developed countries should be emphasized because the participation of these countries in world trade remains marginal and, to date, no least developed country has acceded to the World Trade Organization.

14. Although governance at the national and international levels has received greater attention in recent years, there has only been some modest progress in several areas; the major promises of major initiatives undertaken by the international community and Governments have yet to be fully realized.

**Poverty strategies**

15. To support the Decade for the eradication of poverty and the implementation of the outcome of the Social Summit, the United Nations Development Programme launched the Poverty Strategy Initiative in 1996.\(^\text{10}\) With an initial funding of US$ 11 million, most of the 11 selected country projects were started in 1997 or 1998 with particular focus on various areas, including qualitative assessment of poverty, household surveys and poverty profiles, poverty-reduction strategies and programmes, analyses of social spending and aid flows to basic services; national human development reports, capacity development for poverty-reduction planning, as well as social mobilization and constituency building.

16. Overall, the evaluation of the Poverty Strategy Initiative studies found that they made a significant impact on the formulation of poverty-reduction programmes, advocacy and public awareness and capacity-building. They generated
relevant knowledge with regard to policy-making by stimulating policy discussion in many countries where poverty was not even on the political agenda. Raising awareness among policy makers and the civil society and the participation of all stakeholders brought a sense of urgency in dealing with poverty. With a strengthened knowledge base, the transfer of skills to national experts and government agencies and civil society have helped to build capacity in formulating poverty-reduction strategies and in performing advocacy roles better. Lastly, the Poverty Strategy Initiative has functioned as a catalytic agent in promoting inter-agency cooperation and in leveraging additional resources for similar activities.

17. In general, the promotion, adoption and implementation of poverty-reduction strategies has made good progress on several fronts. Perhaps one of the biggest boosts to this effort has resulted from the implementation of the poverty reduction strategy paper mechanism. Preparation of the papers is seen as a vehicle to orient aid towards key issues and objectives in the poorest countries through a participatory process, emphasizing country ownership and linking overall national policy to external assistance programmes.

18. Increasingly, the focus of the poverty reduction strategy papers is the achievement of the development goals of the Millennium Declaration, principally the goal of poverty reduction. The mechanism is also being explored as a means to orient bilateral development assistance by the members of the Development Assistance Committee of the Organisation for Economic Cooperation and Development.

19. As of March 2003, 25 full poverty reduction strategy papers have been reviewed and a further 23 countries have completed interim ones. The use of the mechanism reflects an attempt to place renewed emphasis on national ownership of development and highlights the importance and urgency of capacity building to enable countries to design and implement country-driven development strategies in a participatory way. However, the Commission for Social Development in its agreed conclusions on national and international cooperation for social development made the crucial point that, in order for poverty reduction strategy papers to provide an improved social outcome a broad platform was necessary to place them within a wider context where all social objectives would be adequately taken into account.\textsuperscript{11}

20. Monitoring of the Millennium Development Goals is already under way at the country level. Countries have undertaken voluntary reporting of progress towards achieving the development goals of the Millennium Declaration and, to date, about 40 countries have already completed their first report. Such reports are not meant to include in-depth analysis and detailed policy recommendations but rather, should be seen to engage political leaders and top decision makers, and to mobilize civil society, communities, the general public and the media. They provide a systematic and identifiable follow-up to the global conferences and world summits of the 1990s. These reports are therefore a tool for awareness-raising, advocacy, alliance-building, and renewal of political commitments at the country level, as well as for building national capacity for monitoring and reporting on goals and targets. The intention is for these country reports to help to focus the national development debate on specific priorities.
D. Conclusions

21. Progress in the implementation of the Decade for poverty eradication has been patchy and uneven. While there has been progress in the faster growing developing countries on many fronts, the poorer developing countries, where economic and social development is most needed, still lag behind. Further efforts are needed at the national level, supported by the regional and international communities, if these goals are to be achieved.

22. Yet, there are some fresh developments and results that point towards progress. These efforts are worthy of concerted support at the regional and international levels and it is noted that there have been advances on this front as well, most recently and visibly in Africa. If these efforts can be sustained and leveraged, the political and social environment that emerges will provide a sound and stable basis for economic and social development that will contribute to the achievement of the Millennium Development Goals.

23. It is also noted that strategies for poverty reduction have been adopted by an increasing number of countries as part of an integrated approach to economic and social development, emphasizing national ownership and broad-based participation of stakeholders. Progress on this front underscores the national commitments to poverty eradication and the closer alignment between countries’ overall policy frameworks and their external assistance programmes. However, in order for poverty reduction strategy papers to provide an improved social outcome, a broad platform is necessary to place them within a wider context where all social objectives would be adequately taken into account.

24. It is also encouraging to note the modest revival of official development assistance levels following the commitments made in Monterrey. Although the levels are still well below their historical highs and considerably below the minimum levels needed to attain the Millennium Development Goals, recent events give cause for optimism that they may continue to rise. The reality facing poorer countries striving for economic and social development remains unchanged: despite the best efforts of many of the poorer countries to utilize fully their domestic resources for development and poverty reduction, external assistance and international cooperation are still key to ensuring that they will be able to achieve the development goals as envisioned in the United Nations Millennium Declaration.

II. Proposed objectives and activities for the International Year of Microcredit, 2005

A. Introduction

25. The General Assembly, at its fifty-third session, adopted resolution 53/197 of 15 December 1998, in which it proclaimed 2005 as the International Year of Microcredit and requested that the observance of the Year be a special occasion for giving impetus to microcredit programmes throughout the world. The Assembly invited Governments, the United Nations system, all concerned non-governmental organizations, other actors of civil society, the private sector and the media to
highlight and give enhanced recognition to the role of microcredit in the eradication of poverty, its contribution to social development and its positive impact on the lives of people living in poverty. It also invited all involved in the eradication of poverty to consider taking additional steps, including the strengthening of existing and emerging microcredit institutions and their capacities, so that credit and related services for self-employment and income-generating activities might be made available to an increasing number of people, and to develop further other microfinance institutions.

26. The proposed objectives and activities for the Year that are discussed in this section of the report take into account the views of Member States in response to the note verbale dated 6 December 2002 from the Secretary-General. The proposals also reflect the views of relevant organizations of the United Nations system and interested non-governmental organizations. Recommendations emanating from the recent major United Nations conferences and summits on issues related to microcredit and microfinance were also taken into consideration.

B. Background and overall orientation

27. Governments, relevant agencies of the United Nations system and key industry stakeholders are emphasizing that the unique and widely varying needs of poor people require an extensive range of financial products and services, including credit, savings, insurance and asset-building mechanisms. The concept that poor people benefit from microcredit has evolved to the recognition that the people living in poverty deserve access to a range of financial tools that enhance their ability to increase incomes, build assets and mitigate the vulnerability in times of economic stress.

28. The provision of a range of financial services for the poor people is often referred to as microfinance. Microcredit or microfinance has received increasing attention as an effective anti-poverty tool and has successfully contributed to lifting people out of poverty in many developing countries. The role of microcredit in the eradication of poverty was stressed in agreed conclusions 1997/1 adopted by the Economic and Social Council on 25 July 1997, in which the Council called for strengthening the institutions supportive of microcredit and recognized importance of access of microcredit of people living in poverty to enable them to undertake microenterprises to generate self-employment and contribute to achieving empowerment, especially women.

29. Major United Nations conferences and summits have given emphasis to the role of microcredit and microfinance in poverty eradication and empowerment of poor people, particularly women, including the Programme of Action of the World Summit for Social Development,6 the twenty-fourth special session of the General Assembly,7 the Beijing Declaration and Platform for Action of the Fourth World Conference on Women14 and the further actions and initiatives taken to implement the Beijing Declaration and Platform for Action;15 the Programme of Action for the Least Developed Countries for the Decade 2001-2010;16 the Monterrey Consensus of the International Conference on Financing for Development;17 and the Plan of Implementation of the World Summit on Sustainable Development.18 The Monterrey Consensus specifically mentions microfinance initiatives and recognizes that microfinance and credit for micro, small and medium-sized enterprises, including in
rural areas, particularly for women, as well as national savings schemes, are important for enhancing the social and economic impact of the financial sector.

30. The momentum generated by the major United Nations conferences and summits, particularly the World Summit for Social Development and the Fourth World Conference on Women, inspired the holding of the Microcredit Summit in Washington, D.C., in 1997 which, through its Declaration and Plan of Action, launched a nine-year global campaign to reach 100 million of the world’s poorest families, and especially the women in those families, with credit for self-employment and other financial and business services by the year 2005. The latest data show that the number of poor people who benefited from microcredit programmes grew from 7.6 million in 1997 to 26.8 million by the end of 2001.19

31. Sound microfinance is having a positive impact on the lives of poor people, improving their household incomes, building assets and safeguarding them against vulnerabilities arising from economic and other crises, through savings, credit, insurance and other financial vehicles. Evidence from microfinance programmes demonstrates that access to financial services enables poor people to improve their health, nutrition, education and school enrolment of their children.20 Financial services also help to improve the stability and growth of microenterprises. However, poor people in most countries still do not have access to formal financial services. The challenge now is to expand the reach and develop more effective services for poor people on a sustainable basis. Incorporating empowerment approaches in microfinance and building networks to advocate women’s greater participation is also an important priority. Focus is needed on promoting good practices, capacity-building of microfinance institutions and forging partnerships between Governments, donors, international organizations, non-governmental organizations, the private sector and other stakeholders.

C. Proposed objectives

32. The International Year of Microcredit will be an important event for giving impetus to microcredit and microfinance programmes and activities around the world. The objectives of the Year may include building upon the following:

(a) Microcredit and microfinance and development goals. Assessment and promotion of the contribution of microcredit and microfinance towards achieving the goals as contained in the Millennium Declaration and the goals of major conferences and summits;

(b) Public awareness. Promotion of awareness and understanding of microcredit and microfinance, their role in poverty eradication, including achieving the Millennium Development Goals, and how they empower people and contribute to communities;

(c) Pro-poor financial systems. Identification of critical measures for Governments to optimally stimulate sustainable, pro-poor financial sectors, and build collective visions and strategies that position microcredit and microfinance as integral parts of a country’s financial systems;

(d) Sustainable access. Increase of the capacity of microcredit and microfinance service providers to be more effective and efficient at addressing the needs of poor and very poor people, and strengthening the capacity of donors and
Governments to support those institutions by following good practice microcredit and microfinance principles;

(e) Innovation and partnerships. Promotion, support and creation of innovation and strategic partnerships between and among Governments, organizations of the United Nations system, private and public sectors, civil society, non-governmental organizations and other microcredit and microfinance stakeholders to build and expand the outreach and success of microcredit and microfinance.

D. Activities and initiatives at the national, regional and international levels

1. Microcredit and microfinance and development goals

33. Expanding microcredit and microfinance can contribute towards achieving the goals contained in the Millennium Declaration, as well as the goals of major conferences and summits. The following activities may be undertaken to assess and promote the contribution of microcredit and microfinance in that regard:

(a) Evaluation of the progress made towards the Microcredit Summit target of reaching 100 million families with sustainable financial services;

(b) Identification, mapping and promotion of microcredit and microfinance activities of Member States, relevant organizations of the United Nations system and other stakeholders, and the contribution of those activities to achieving the Millennium Development Goals;

(c) Assessment of current microcredit and microfinance resource allocations, including funding, and evaluation of resources required to achieve the Millennium Development Goals;

(d) Encouragement of Member States to use the Year as an opportunity to develop strategies for 2005-2015 in the light of the contribution of microcredit and microfinance to achieving the Millennium Development Goals.

34. The outcomes of these efforts would be synthesized in a report with follow-up recommendations to strengthen capacity-building of the microcredit and microfinance sectors and presented to the General Assembly at its fifty-ninth session.

2. Public awareness

35. The Year offers a platform for increasing public awareness and knowledge about microcredit and microfinance, their role in achieving the Millennium Development Goals and how they empower people and contribute to communities.

Activities at the international level

36. The following advocacy activities may be carried out to create awareness about the importance of microcredit and microfinance in poverty reduction:

(a) Designation of a “world microcredit or microfinance day”, establish a web site and invite prominent personalities to promote the Year’s objectives and activities;
(b) Increasing the access of the public to information on microcredit and microfinance by producing and distributing printed, visual and audio materials, such as reports, booklets, newsletters, press releases, press kits, posters, stamps, television and radio programmes, and involve the media and other sources of public information;

(c) Promotion of new innovations, alliances and other good practices through reports, video, audio and other mediums to highlight the positive impact of microcredit and microfinance on empowering clients; the results of microcredit and microfinance performance assessments; and the contribution of microcredit and microfinance to achieving the Millennium Development Goals;

(d) Sharing of experiences and lessons learned on microcredit and microfinance as well as strategies and modalities to improve the provision of appropriate financial services to poor and very poor people;

(e) Launching of a campaign to highlight the excellent performance of microcredit and microfinance clients, particularly women, in repaying loans, managing household incomes, using various financial instruments to build assets; building microenterprises; investing in communities; and contributing to development, especially in the least developed countries.

Activities at the regional and national levels

37. Actions may include:

(a) Organization of regional and national study tours and workshops on microcredit and microfinance good practice programmes and institutions in order to sensitize the public, share expertise, address regional barriers and build collaboration;

(b) Organization of events to raise awareness about good practices and increase commitment to scale up microcredit and microfinance efforts, for example, by establishing an award of excellence for national institutions offering superior microcredit or microfinance services;

(c) Production of documents and videos and host events to build public awareness on the role of microcredit and microfinance in reducing poverty and promoting development, on progress made, constraints faced and on ways to expand microcredit and microfinance programmes;

(d) Expansion of outreach through improved microcredit and microfinance marketing targeted at increasing the information for poor people;

(e) Encouragement of the involvement of educational institutions in the promotion of microcredit and microfinance concepts and practices.

3. Pro-poor financial systems

38. The Year provides an opportunity to identify critical measures for Governments to stimulate sustainable, pro-poor financial sectors and build collective visions and strategies that position microcredit and microfinance as an integral part of country’s financial systems.
Activities at the international level

39. With a view to stimulating sustainable, pro-poor financial sectors, consideration could be given to the establishment of a working group comprising the Bretton Woods institutions, the Consultative Group to Assist the Poor, relevant agencies of the United Nations system and other key stakeholders to develop recommendations for pro-poor financial policies, regulatory and legal frameworks at the national, regional and international levels. Specific initiatives may include:

(a) In consultation with Governments, donors, financial institutions, non-governmental organizations, and other stakeholders, and based on research and broad-based experience, identification of critical measures for Governments to stimulate sustainable, pro-poor financial sectors;

(b) Integration of extensive bodies of work conducted by Governments, donors, educational institutions, non-governmental organizations and financial institutions that have championed an integrated approach to microcredit and microfinance in their countries and regions;

(c) Based on the findings, preparation of recommendations for stimulating sustainable, pro-poor financial sectors and submit them to the General Assembly at its fifty-ninth session, so that Governments can consider them and set measurable targets leading to pro-poor sustainable financial sectors;

(d) Organization of training workshops on the critical measures that Government officials and other stakeholders need to adopt for stimulating pro-poor financial systems;

(e) Establishment of awards for countries with good practices in microcredit or microfinance.

Activities at the regional and national levels

40. Actions may include:

(a) Consideration of the need to review regional and national legal, regulatory and institutional frameworks that restrict the access of people living in poverty, especially women, to financial services;

(b) Provision of training and incentives for improving access and strengthening the capacity of pro-poor financial services;

(c) Working with the formal financial sector (international investors, local, wholesale, retail, etc.) to expand their involvement in building microcredit and microfinance sectors and outreach to microcredit and microfinance clients.

4. Sustainable access

41. The Year offers an occasion to build sustainability in the microcredit and microfinance sectors. The foundation of such sectors lies in the capacity of microcredit and microfinance service providers to be more effective and efficient at addressing the needs of their target markets, and the capacity of donors and Governments to support those providers by following good practice microcredit and microfinance principles.
Activities at the international level

42. The Year could augment and build upon currently available research to enhance sustainable microcredit and microfinance. In addition, an array of new activities could highlight the importance of sustainability and provide stakeholders with tools and knowledge to contribute successfully to sustainable microcredit and microfinance, namely:

   (a) Promotion of working platforms for Governments, donor countries, United Nations agencies, public, private sectors, and non-governmental organization stakeholders to transfer successful strategies (linkages, technical assistance, capacity-building, good governance, product and service development, technology, including information and communications technologies) needed to expand sustainable microcredit and microfinance;

   (b) Augmentation of efforts to implement uniform, sustainability-focused performance measurement standards that are rigorous, transparent and universal and build consensus among stakeholders and report on those agreed measures.

Activities at the regional and national levels

43. Regional and national actions may play a lead role in advancing sustainable access to microcredit and microfinance services for poor people, namely:

   (a) Building on national financial sector strategies to create national mechanisms to coordinate donor support for microcredit and microfinance which is consistent with the country’s vision for sustainable microcredit and microfinance;

   (b) Exploration of obstacles to sustainable microcredit and microfinance and evaluate actions taken to establish and strengthen both, provide prudential saving and insurance and related financial services to poor people and very poor people;

   (c) Assessment of microcredit and microfinance skill-building training programmes to assist national institutions in selecting appropriate, effective and efficient means to increase institutional capacity for offering sustainable microcredit and microfinance;

   (d) Provision of capitalization and institutional development support to sustainable financial institutions that meet high performance standards in transparency and reaching a large number of poor people.

5. Innovation and partnerships

44. The Year presents an opportunity to promote, support and create innovation and strategic partnerships between Governments, donor countries, relevant organizations of the United Nations system, private, public sectors, civil society, non-governmental organizations and other stakeholders, as well as to further expand the success of microcredit and microfinance at addressing the financial needs of poor people.

Activities at the international level

45. In an effort to forge strategic partnerships, it is important to build consensus on the distinct and collective purposes, comparative advantages, roles and responsibilities for microcredit and microfinance stakeholders in supporting the
successful growth of microcredit and microfinance. This effort will directly feed into other international level activities, namely:

(a) Organization of activities and events that support and promote partnership initiatives and build innovative and synergistic solutions to key issues in areas such as the needs of the least developed countries, gender disparity, rural isolation, the very poor, lack of infrastructure and health services, as well as basic solutions to increasing capacity and scale of operations;

(b) Coordination of communication platforms that recognize the role of the private sector in poverty reduction as a positive trend and promote private sector financial innovations and public-private partnerships to deepen domestic financial markets;

(c) Promotion of capacity-building networks, partnership building exchanges and mentoring opportunities where front-line practitioners can share their experiences and learn from each other. This may include group exchanges, Internet conferences, thematic round tables, networking programmes, and opportunities to link institutions together to build solutions;

(d) Support and promotion of innovation partnerships between banking, information and communication technology and microcredit/microfinance sectors to use information and communications technology to improve access to financial services for poor people.

**Activities at the regional and national levels**

46. At the regional and national levels, a coordinated approach to microcredit and microfinance that encourages and supports innovation and strategic partnerships will enhance efforts and create opportunities to transfer successful practices between partners. Coordination, partnerships and innovation sharing could be the trademarks of the Year, and the value of these strategic linkages needs to be promoted. Initiatives may include:

(a) Collaboration with regional networks to expand the depth, scale effectiveness and efficiency of microcredit and microfinance within the regional context and to use collaboration and partnership to enhance the access of disadvantaged women and other marginalized groups to financial services by strengthening links between banks and intermediary lending organizations, including legislative support and training;

(b) Building of collaboration initiatives to address unique microcredit or microfinance needs through organizing meetings of donors and least developed countries to address obstacles encountered in developing microcredit or microfinance in the least developed countries context; donors, agricultural and rural financial institutions in the region to adapt microcredit and microfinance good practices to the reality of poor rural households; national and regional women’s groups to establish and expand innovative financial services adapted to meet the needs of poor women;

(c) Development of platforms to research, document and showcase national good practices, success stories, new partnerships in microcredit and microfinance that may include examples of client-focused products and service strategies,
financial delivery mechanisms that meet marginalized groups and in-country donor
staff collaboration that results in expanded reach and innovation.

E. Institutional and funding arrangements

47. Past experience with international years and other similar events indicates that
the General Assembly usually designates a United Nations entity to serve as the lead
agency for coordinating and implementing the activities of the United Nations
system for the observance of the year. The role of lead entity for the International
Year of Microcredit, 2005 may be undertaken jointly by the United Nations Capital
Development Fund and the Department of Economic and Social Affairs of the
Secretariat. The Fund, as the policy advisory and technical assistance centre for
microfinance within the United Nations Development Programme group, is well
positioned to participate in the joint coordinating entity, as it supports a variety of
initiatives that facilitate the provision of financial services for the poor, through
microfinance programmes. The Department of Economic and Social Affairs is well
positioned to participate in the joint coordinating entity by virtue of its role in the
implementation of the outcomes of the major United Nations conferences and
summits, in particular the World Summit for Social Development and the twenty-
fourth session of the General Assembly, as well as the implementation of the first
entity can collaborate closely with the members of the Consultative Group to Assist
the Poor and other relevant agencies of the United Nations system involved in
microcredit and microfinance.

48. Coordinated activities and initiatives at the national level through partnerships
and participation of all relevant actors in society are essential for the observance
of the Year. This approach can be facilitated through setting up national coordinating
mechanisms responsible for promoting the related activities. The Economic and
Social Council guidelines for the observance of international years encourages
countries to establish national committees or other mechanisms for preparing for
and conducting the year at the national level.

49. Successful observance of the Year will also depend on the ability to mobilize
funding through voluntary contributions. Support is needed from all partners in
order to promote public awareness about microcredit and microfinance and
undertake other activities related to the observance of the Year.

F. Conclusions and recommendations

50. Microcredit and other financial services for poor people are important
instruments for poverty reduction and for empowering poor people, especially
women. The observance of the Year provides a significant opportunity to raise
awareness of the importance of microcredit and microfinance in the eradication
of poverty, share good practices and further enhance programmes that support
sustainable pro-poor financial sectors around the world. Expanding outreach
can contribute to achieving the goals of major conferences and summits as well
as the Millennium Development Goals, particularly targets related to halving
the proportion of the people living in extreme poverty by 2015, and promoting
gender equality and empowerment of women.
51. The General Assembly may wish to consider the following actions:

(a) Invite the Department of Economic and Social Affairs of the Secretariat and the United Nations Capital Development Fund, as the policy advisory and technical assistance centre for microfinance within the United Nations Development Programme group, jointly to coordinate the activities of the United Nations system for the preparation for and observance of the Year and call upon the relevant organizations of the United Nations system to collaborate with the coordinating entities;

(b) Invite the World Bank, the Consultative Group to Assist the Poor, the United Nations Capital Development Fund and the relevant organizations of the United Nations system to establish a working group to prepare recommendations for stimulating sustainable, pro-poor financial sectors;

(c) Invite Member States to consider establishing national coordinating committees or focal points with responsibility for promoting the activities related to the observance of the Year;

(d) Call upon Member States, relevant organizations of the United Nations system, non-governmental organizations, private sector and other actors to collaborate in the preparation for and observance of the Year;

(e) Invite interested Member States to consider convening an informal group for the International Year of Microcredit, following the example of the International Year of Mountains Focus Group, composed of interested permanent representatives to the United Nations;

(f) Encourage Member States, relevant organizations of the United Nations system, non-governmental organizations, the private sector and foundations and other actors to make voluntary contributions and lend other forms of support to the Year, in accordance with the guidelines for international years.

Notes

1 The discussion in section I draws upon the final working draft of the monitoring report on indicators of trends in implementation of the millennium development goals and targets, 1990-2003, prepared by the Department of Economic and Social Affairs Statistics Division and Development Policy and Planning Office.

2 See A/56/326, annex, for more details of the other time-bound goals.

11 Official Records of the Economic and Social Council, 2003, Supplement No. 6 (E/2003/26), draft resolution V.

12 As at 1 July 2003, replies were received from Algeria, the Bahamas, Belgium, Canada, China, Fiji, Gabon, the Gambia, Guatemala, Kuwait, Morocco, Nauru, the Netherlands, Peru, the Philippines, Qatar, the Republic of Moldova, Switzerland, Yemen and Zambia. Responses were also received from the United Nations Conference on Trade and Development, the United Nations Development Fund for Women, the United Nations Population Fund, the United Nations Children’s Fund, the World Food Programme, the International Labour Organization, the Food and Agriculture Organization of the United Nations, the United Nations Educational, Scientific and Cultural Organization, WHO, the World Bank and the International Monetary Fund. Relevant departments and offices in the United Nations Secretariat were also consulted. Responses were also received from the Microcredit Summit Campaign, and the Foundation for International Community Assistance.

13 It was proposed by some countries and United Nations agencies that the terms “microcredit” and “microfinance” be used interchangeably. However, in the literature, “microcredit” and “microfinance” are not identical concepts as microfinance includes a range of financial services, such as savings and insurance, besides credit.
